Capacitors can be included in such devices as integrated circuits. Such capacitors are provided in a variety of sizes and shapes depending on the type of devices in which they are to be used. Capacitors are usually made of electrically conducting metal such as aluminum, tantalum, or other suitable conducting metals. The metal is deposited on a substrate of insulating material. Once the metal is deposited, it is etched and oxidized to form the finished capacitor. FIGS. 1 and 2 illustrate a typical conventional process for fabricating a capacitor. An aluminum or other suitable metal layer 10 is deposited on a substrate 12. Once the aluminum layer 10 is deposited, it is often subjected to a "shaping" step that causes the aluminum to assume the shape of the desired finished capacitor. Shaping is typically achieved by etching the

aluminum layer 10 until the metal layer 10 is depressed into a cavity or indentation in the substrate 12. Typically, the cavity in the substrate is etched by dry etching using oxygen and/or an oxygen containing gas. The typical process is carried out at an elevated temperature. Typically the temperature is approximately 250.degree. C. An oxidizing agent is used to carry out the etch process. Suitable oxidizing agents are oxygen and/or an oxygen containing gas. The shaped aluminum layer is then subjected to a second etch process that removes the material from the substrate 12 except where it is to remain as the finished capacitor. In the second etch process, the aluminum layer 10 is etched with a mixture of sulfuric acid and nitric acid or a similar etchant. The first etch step is typically referred to as the etch front forming step and the second et a1d647c40b

I'm using autolayout in storyboard and constraints and I can't figure out how to make a scroll view with 2 subviews: 1 scroll view and inside it 1 UITableView and add a constraint to scroll view to scroll it all together. It looks like this: And I want it to look like this: I already tried this: let vc = UIViewController() vc.view.addSubview(scrollView) scrollView.addSubview(tableView) scrollView.addSubview(contentView) But it doesn't work because "contentView" needs to be constrained to all views in it so I can't give it top, left, bottom and right constraints. I also tried this: let scrollView = UIScrollView() scrollView.addSubview(contentView) scrollView.addSubview(tableView) contentView.addSubview(scrollView) scrollView.frame = CGRect(x: 0, y: 0, width: 200, height: 200) But it looks like this: I want scroll view to cover all table view view and make it scrollable when content is added. A: I solved my problem using code and storyboard. Using code: let scrollView = UIScrollView() scrollView.addSubview(tableView) scrollView.addSubview(contentView) contentView.frame = CGRect(x: 0, y: 0, width: 200, height: 200) Using storyboard: In storyboard: Add scroll view in view controller Add table view in scroll view Add content view Make scroll view height equals to content view height Make
